Keyword:

☒ with space

Argument Optional 

Enter the keyword you would like to use for this input. By default, keywords require arguments. You can alternatively select if an argument should be optional or if no argument is required.

Title:

Subtext:

Enter the title and subtext you would like to use for this keyword based input. These represent the text you see in Alfred's results when using the keyword.

Drop an icon above.

VidComp

Compress ".mp4" and ".mov" video files

This action opens Terminal with the typed command. To run a command without Terminal or to use a command's output in the workflow, use a Run Script action instead.

Note that any outputs connected to this action will receive the passed through (query), and not the output from the Terminal.

Command: `python3.7 /Users/anthony/MEGA/DOCUMENTS/Programmation/Python/MyPythonProjects/VideoCompressor/video_compressor.py`

The command to insert into the Terminal window.

Escaping: ☐ Spaces ☐ Backquotes ☐ Double Quotes ☐ Backslashes ☐ Brackets ☐ Semicolons ☐ Dollars

Replace (query) in your script with the passed argument, escaping as selected.
