VidComp

Compress ".mp4" and ".mov" video files. - v0.1

Name: VidComp

Description: Compress ".mp4" and ".mov" video files.

Category: Tools

A name, description and category for your Workflow.

Bundle Id: anthony.guinchard.compress.video

Created By: Anthony Guinchard

Website: <https://github.com/Antho1426>

Bundle Ids should be unique. When importing a workflow, Alfred uses the Bundle Id to know which workflow to upgrade.

VidComp

Compress ".mp4" and ".mov" video files. - v0.1

Inserting this “Terminal Command” block is the trick I found to avoid launching iTerm without actually executing the Python program (stored at a specific place in my computer) when running the Alfred Workflow!

This action opens Terminal with the typed command. To run a command without Terminal or to use a command's output in the workflow, use a Run Script action instead.

Note that any outputs connected to this action will receive the passed through {query}, and not the output from the Terminal.

Command:

echo "Running VidComp in next iTerm tab\!"

The command to insert into the Terminal window.

Escaping:

☐ Spaces
 ☐ Backquotes
 ☐ Double Quotes
 ☐ Backslashes
 ☐ Brackets
 ☐ Semicolons
 ☐ Dollars

Replace {query} in your script with the passed argument, escaping as selected.

Compress ".mp4" and ".mov" video files. - v0.1

This action opens Terminal with the typed command. To run a command without Terminal or to use a command's output in the workflow, use a Run Script action instead.

Note that any outputs connected to this action will receive the passed through (query), and not the output from the Terminal.

Command:

python3.7 /Users/anthony/MEGA/DOCUMENTS/Programming/Python/MyPythonProjects/VideoCompressor/video_compressor.py

The command to insert into the Terminal window.

Escaping:

☐ Spaces

☐ Backquotes

☐ Double Quotes

☐ Backslashes

☐ Brackets

☐ Semicolons

☐ Dollars

Replace (query) in your script with the passed argument, escaping as selected.
